

A Bilingual Model For English And Spanish

We want to create a translator from English to Spanish and vice-versa using pre-embedding technology. The structure of the translation process will be the one indicated in the next slide, based on Vauquois Triangle.

In particular, we will use these databases and tools:

1. Universal Dictionary of Concepts: <https://gitlab.com/dikonov/Universal-Dictionary-of-Concepts>
2. Parallel Universal Dependencies: <https://universaldependencies.org/>
3. Freeling: <https://nlp.lsi.upc.edu/freeling/node/1>
4. European Parliament Parallel Corpus: <https://www.statmt.org/euoparl/>
